FLU SHOT?

Here's what you should know. . .

According to Hugh Fudenberg, MD, the world's leading immunogeneticist and 13th most quoted biologist of our times (nearly 850 papers in peer review journals),

- if an individual has had **five consecutive flu shots** between 1970 and 1980 (the years studied),
- **his/her chances of getting Alzheimer's Disease is ten times higher than if they had one, two or no shots.**

Dr. Fudenberg said it was due to the

- **mercury and aluminum** that is in every flu shot (and most childhood shots).
- **The gradual mercury and aluminum build up in the brain causes cognitive dysfunction (senility).**^{1,2}

Is that why Alzheimer's is expected to quadruple?³

¹ It is possible to hear Dr. Fudenberg himself say the above and Dr. Harold Buttram, Howard Umowitz, Ph.D., Andrew Akefield, M.D., Ph.D. (lead author of the famous autism-MMR vaccine research paper published in The Lancet), Barbara Loe Fisher and at least 30 others discussing the childhood vaccination controversy. Koren Publications catalog, NVIC Conference Audio Set. The 1st International Public Conference on Vaccination hosted by the National Vaccine Information Center (NVIC). **New findings on the biological mechanisms of vaccine injury and death, learning disabilities, autism, chromosome damage, Gulf War Syndrome, polio vaccine, contamination and more.** Up-to-date, revealing, even humorous, this was a powerful historic meeting.
